

# Gamified Security Awareness For Developers Training Platform

---

Advisor: Thomas Daniels  
Client: Allstate Insurance Group

Charlie Millar  
*Sprite Development*

Caleb Lemmons  
*Level Creation + Testing*

Sri Charan Gurramkonda  
*Project Lead*

Brayden Lamb  
*Game Design Lead*

Derek Lengemann  
*Level Creation + Testing*

Parker Schmitz  
*Technical Lead*

# Outline

- Introduction
- Requirements
- Design Overview
- Project Outcomes
- Demonstration
- Conclusion

# Introduction

## Problem Statement

- Our client challenged us to design an engaging cybersecurity game that teaches secure OWASP coding concepts to software developers.
- While resources exist to teach security concepts to individuals of all levels, they often lack a compelling story, purpose, and engagement.

## Stakeholders

- AllState Insurance Group
  - Sudesh Kannan - Cyber Security & Privacy Professional
  - Ethan Wilder - Principal Security & Engineering Leader

## Our Solution

# Market Research

- Applicable Challenges
  - Enterprise Level
  - Well-Regarded
- Steep Learning Curve
  - Complex Challenges
  - No Particular Narrative
- Not Entry Friendly
  - College Junior/Senior
  - Cybersecurity Engineer

**Business CTF** features jeopardy-style hacking challenges based on real-world vulnerabilities and emerging threats. These challenges are split into relevant skills categories pertaining to different aspects of cybersecurity.

 <b>Cloud</b> <b>Real-world relevance:</b> Identify and deal with common cloud security flaws. (This is becoming increasingly important with the rise of remote work and reliance on cloud infrastructure).	 <b>HostEx</b> <b>Real-world relevance:</b> Identify or exploit vulnerabilities that would allow attackers to remotely access a network, gain elevated privileges, or move deeper into a network.	 <b>Crypto</b> <b>Real-world relevance:</b> Protect sensitive information from unauthorized access by identifying encryption flaws. For example, banking applications and financial transactions.
 <b>Hardware</b> <b>Real-world relevance:</b> Find and secure against vulnerabilities, weaknesses, or flaws that can compromise infrastructure systems.	 <b>Pwn</b> <b>Real-world relevance:</b> Develop exploits/attacks based on binary files that interact with computer memory and processors.	 <b>Forensics</b> <b>Real-world relevance:</b> Investigate an incident and identify who is responsible.
 <b>Reversing</b> <b>Real-world relevance:</b> Discover hidden or undocumented features in	 <b>Web</b> <b>Real-world relevance:</b> Find and exploit code flaws, misconfigurations, and	

# Market Research

- Applicable Challenges
  - Basic Foundations
  - Not Enterprise Level
- Great For New Learners
  - High School Student
  - College 1st/2nd Year
- Resonates With Audience
  - Interesting Narratives
  - Scholarship Incentive

# Introduction

## Problem Statement

- Our client challenged us to design an engaging cybersecurity game that teaches secure OWASP principles to software developers.

## Stakeholders

- AllState Insurance Group
  - Sudesh Kannan - Cyber Security & Privacy Professional
  - Ethan Wilder - Principal Security & Engineering Leader

## Our Solution

- We developed CyEscape, a dystopian-style video game with a narrative about rediscovering identity. Each level presents an OWASP Top 10 challenge that the player must overcome.

# Technology Platform(s) Used

- No Hardware Specifications
- Unity Game Engine
  - Game Development
  - Game Testing
- GitLab
  - Version Control
  - Task Listing
- Krita
  - 2D Asset Creation
  - Compatible With Unity
- Microsoft Teams
  - Communication
  - Weekly Meetings

KRITA

# Requirements Pt. 1

## Functional

- **Unity Game Engine**
  - Free Student Subscription
  - Robust Game Design Tools
  - Open Source Tutorials
- Hands-on security challenges that provide basic experience.
  - Incorporates OWASP Top 10
- The player can interact with the environment in each level.

## Resource

- Integrated *help* command in the terminal to provide level hints.
- Design Document for the client outlining game objectives.
- **\*\*Optional\*\*** game manual for player guidance and reference.

OWASP-2024-Release
M1: Improper Credential Usage
M2: Inadequate Supply Chain Security
M3: Insecure Authentication / Authorization
M4: Insufficient Input/Output Validation
M5: Insecure Communication
M6: Inadequate Privacy Controls
M7: Insufficient Binary Protections
M8: Security Misconfiguration
M9: Insecure Data Storage
M10: Insufficient Cryptography

# Requirements Pt. 2

## User Experience

- A visually appealing interface enhances the immersive experience.
- Engaging game clues and rewards are integrated to motivate player.
- Difficulty progression is gradual to accommodate players of all skills.
  - 4 levels are education-focused on OWASP
  - 2 serve as fun mini-games to provide a break

## Performance

- Ensure the game runs smoothly on all supported platforms.
- Optimize resource usage for lower-end device compatibility.
- Support simultaneous interactions and environmental elements.

# Engineering Standards

## IEEE 830-1998 (Software Requirements Specifications)

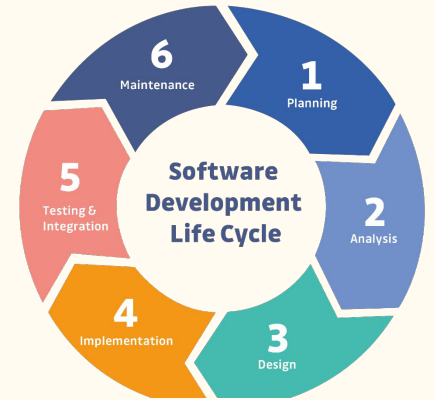

- Ensures clear specifications for both client and educational goals.
- Helps specify functional requirements and in-game interactions.

## IEEE 29119-2017 (Software Testing Standards)

- Structured approach to stress-testing levels after new features.
- Ensures optimal user experience by addressing in-game bugs.

## IEEE 12207-2017 (Software Lifecycle Processes)

- Supports tracking progress through SDLC phases.
- Facilitates client communication proceeding sprints.

Stories	Not started	In progress
Story #1		
Story #2	Task A	Task C
Story #3	Task B Task D	

# Potential Risks & Mitigations

## Game Experience

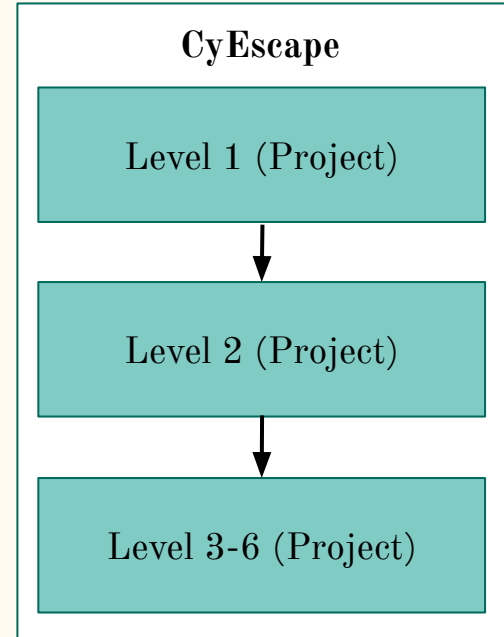

- Minimal game development experience within the group.
- Unfamiliar with Agile methods, sprints, and user stories.

## Software Development

- Diverse coding styles among group members.
- Unity does not allow multi-user collaboration.
- Git is challenging to navigate and use efficiently.

## No “Role Model”

- Our project is *unique*, required us to learn concepts from scratch.
- The process involved continuous brainstorming and iteration.
- Previous semester planning was less helpful due to evolving ideas.

# Design Overview Pt. 1

## 6 Levels On [OWASP Top 10](#)

### Level 1 - Wake Up!

- Basic Terminal Commands (e.g., *ls*, *pwd*, *cat*)
- Open Locked Door With Password Found In *.txt* File

### Level 2 - Hallway Encounter

- Social Engineering Challenge
- Get Past 2 Guards Using Dialogue

### Level 3 - Terminal Mayhem

- Privilege Escalation (Escalating To Admin)
- Minor Cryptographic Failures (Cracking Password)

```
Linux Command Line Tutorials
File Edit View Search Terminal Help
jcpatri@linux-mint / $ ls
bin    dev    initrd.img  lost+found  opt    run
boot  etc    lib         media       proc /sbin
cdrom  home  lib64      mnt         root  /srv
jcpatri@linux-mint / $
```

# Design Overview Pt.2

6 Levels On [OWASP Top 10](#)

## Level 4 - **Identity...**

- Outdated Components (Version Downgrade)
- Password Injection (Basic SQL Injection)
- Security Misconfigurations (Altering Permissions)

## Level 5 - **Regaining Control**

- Insecure Design (Open SSH Port)
- Authentication Failure (Insecure Password)

## Level 6 - **GET OUT!**

- Jetpack Joyride-Style Game
- Projectile Shooting Mechanics

# Game Demonstration - Level 4

# Project Outcomes

## Technical Outcomes

- Level 1 | Status: Complete
- Level 2 | Status: Complete
- Level 3 | Status: Complete
- Level 4 | Status: Complete
- Level 5 | Status: Complete
- Level 6 | Status: Complete

## Non-Technical Outcomes

- Well-Crafted Game Narrative.
- Adequate Team Documentation.
- Improved Team Collaboration.

# Design Tradeoffs & Innovativeness

## Trade Offs

- Unity Game Engine
  - Unreal Engine offers better platform support and realism (2D/3D) but requires a paid subscription.
- Some story elements feel rushed due to time constraints.
- The game has minor bugs and is not yet fully streamlined.
- Focused on quality over quantity with hand-designed sprites.

## Accomplishments

- Custom narrative designed entirely from scratch.
- Targets a broad audience, beyond software developers.
- Successfully developed all six levels by deadline.
  - Covered all OWASP Top 10 vulnerabilities.
- Released the game on GitHub, publicly accessible.

# Conclusion

## Handoff

- Publish the game on Unity Hub. [Download for Free and Start Playing Today!](#)
- Transfer project resources and documentation to a team member for future development.
- Entrust the project to Sebastian Wallace, a client member and game designer, who has contributed significantly to our design process and possesses strong Unity expertise.
